

# ® **BALETITE**GO

## Freshness sealed in

BaletiteGO is a baler film with a high holding force developed for challenging baling conditions and allows the operator to apply fewer layers thereby saving time.

Using BaletiteGO, as an alternative to netwrap, results in better shaped bales by exerting a tighter grip around the bale circumference. It also reduces silage waste as no fodder can become enmeshed.

BaletiteGO's production from the same base material as balewrap means users don't have to separate BaletiteGO from balewrap after use. Instead, both BaletiteGO and balewrap can be recycled together, saving valuable time and labour costs.

BaletiteGO is easy to open for feed out as no net is frozen to the bale, and no fodder can be enmeshed.

## ADVANTAGES AT A GLANCE

# BALETITE GO

**Developed for  
challenging bale  
conditions**

**Increased  
reliability**

**Allows less  
layers in the  
right conditions**

**Convenient  
sleeve  
packaging**

# BALETITE GO

Baletite is manufactured in ISO 9001, ISO 14001 and OHSAS 18001 accredited manufacturing facilities.

In the unlikely event of a problem each reel of Baletite is individually labelled to ensure 100% traceability
